

GOODRAM bumps memory card speeds up to 100 MB/s with 3D NAND flash.

Up to 100 MB/s transfer speed for all standard class 10 memory cards.

Wilk Elektronik SA, European manufacturer of storage and memory products and owner of GOODRAM and IRDM brands, refreshes its memory card lineup, by migrating from planar to 3D NAND for their consumer-level range. Building the whole lineup around 3D NAND and new controllers, helped to deliver up to 100 MB/s for all mainstream memory cards marketed by the Polish manufacturer.

Migration to 3D NAND gives us the opportunity to deliver faster, more durable and higher capacity products – says Wiesław Wilk, CEO of Wilk Elektronik SA. At the same time, this technology will allow us to reduce production costs and offer even more affordable products.

The change applies to all GOODRAM consumer-level class 10 memory cards:

Press release

- M1AA microCard with adapter (microSD)
- M1A0 microCard (microSD)
- S1A0 Card (SD)

They are available in capacities ranging from 16 to 256GB. All memory cards are covered under lifetime manufacturer's warranty and free technical support.
