GOODRAM Industrial Solutions

Reliability, durability and speed matter where difficult operating conditions of industrial equipment require special solutions. A new memory series, called GOODRAM Industrial, is an answer of the Polish producer, Wilk Elektronik, to the demands of the present-day industry.

Wilk Elektronik SA, the producer of GOODRAM brand, is the only European manufacturer of computer memory. More than 20 years experience in the field of computer memory allowed the producer to introduce a new memory series called GOODRAM Industrial, dedicated to professional industrial solutions.

GOODRAM Industrial is a series of memory cards (including Compact Flash), Solid State Drives and memory modules useful both in internal and external industrial applications. Industrial memory is installed, among other things, in video registrators, POS solutions, also parking meters, ticket machines, parcel lockers, control cabinets and other pieces of equipment operating in very difficult industrial conditions.

„GOODRAM Industrial memory series are designed and adapted to continuous work, 24 hours a day, 7 days a week” – says Wiesław Wilk, the CEO of Wilk Elektronik. “That is why they are characterized by a few times greater durability and reliability. They are made in order to operate faultlessly in equipment exposed to vibrations, overload and extreme environmental conditions reaching from -40°C to +85 °C”.

In connection with the investment in the most modern in Europe Surface Mount Technology machines of Panasonic brand, Wilk Elektronik can guarantee shorter lead times even for very big orders. Already today, Wilk Elektronik is proud to be a supplier of memory for equipment applied at combined heat and power plants, industrial automation, digital signage solutions for urban communication, cash registers or even arcade games.
